Why is visualization of an e-business model so important?

- To reach a shared understanding of an e-business model:
  - By actors involved (different enterprises, not sharing a common terminology in the first place)
  - By stakeholders involved: CxO (x=E,O,I,F,T,...)
- No shared understanding leads to:
  - Expensive business development process
  - Poor product/service
  - Unsustainable business case

e³value to visualize the business value perspective?
