

Hans AKKERMANS is an international consultant in knowledge and information management, and a full professor of Business Informatics at the Free University Amsterdam. He holds a cum laude PhD degree in theoretical physics from the University of Groningen. He is a regular international keynote speaker, and has published over 160 scientific articles in information systems, physics, engineering, and e-business. He is the chair of the Board of Governors of the Royal Academy of Sciences KNAW-accredited Netherlands Graduate Research School of Information and Knowledge Systems SIKS. He participates in many national and international cooperative industry-university projects. European projects in recent years in which he had or has a leading role include: OBELIX, OntoKnowledge, PALAS, TRACKS, BUSMOD, CRISP, IRED, FENIX. He co-authored the textbook Knowledge Engineering and Management, MIT Press, Cambridge, MA, 2000, which has been translated into Chinese, and also separately published in India. He co-invented the HomeBots agent concept, realizing smart communicating household and industrial equipment by means of intelligent multi-agent and electronic markets software, now being commercialized as a basis for new electronic energy customer services. He is a key developer of the e3-value methodology and ontology library for networked e-business models and e-services, an interdisciplinary effort involving business administration as well as IT/Information Systems research. He is also a regular reviewer and evaluator for the European Commission. He received a European innovation award for his work twice.
